Europe: Five years into the crisis

Martin Myant
ETUI Brussels
%age growth, world, USA, EU, Euro
State of the European economy

- Note three points; doing worse than other parts of the world, not just a eurozone issue, forecasts always optimistic, so far,
- wrong diagnosis of problems (caused from finance/banking and now helping even less; diagnosis in debt and competitiveness),
- wrong policies (strict austerity, ‘internal devaluation’),
- likely (very) slow recovery, but will be some,
- will be differences, increasing *divergences*, but not simply increasing old inequalities, performance diverging by several country groups.
%age growth 2008-2013
What causes prolonged depression?

• Downturn 2008-9 easily explained, differences between countries
• fall in financial inflows (esp private; hits Baltics, hu), fall in exports (de, cz, sk), gvt spending (continues old, not much conscious stimulus, counters),
• since 2009? Broadly, down from cuts in G (‘austerity’), up from exports, highly varied,
• austerity deepens depression; promised to solve debt problems and meant to enhance international competitiveness.
Was debt the problem?

- Crisis not, in general, caused by past excessive gvt borrowing,
- debts grew with increased budget deficits after crisis,
- because of lower tax revenues, continued spending (in some), bank rescues (in several), further depression from austerity,
- note also that it doesn’t seem to be a big worry, eg Ireland judged to be doing quite well...
- no precise point at which debt becomes ‘unsustainable’, (once central bank supports)…
Debt/GDP, 2004-8 and 2013
Was balance of payments the problem?

- ‘surplus’ and ‘deficit’ countries, both within and outside euro zone,
- current account 2003-8;
- lv; -15.3% of GDP,
- gr; -13.8%,
- de; +5.3%,
- se; +7.7%,
- NOT cause of crisis, but coincided as deficits financed by inflows which stopped
- deficits massively reduced/reversed (2013; gr, -2.3%; lv, -1.6%, biggest deficit is uk, increased; -4.3%)
- but mostly from falling imports, seemingly random changes in exports...
Exports and imports, 2008 to 2013, 2005 prices
What explains export differences?

- Simple theory, cut wages, restore ‘competitiveness’, increase exports,
- wrong concept of competitiveness and hence wrong measure (ULC, taken as COSTS not productivity, quality),
- Note;
  - export growth not correlated with wage levels/cuts,
  - wages often rising precisely in export sectors (big falls, almost universal; public sector, health, education. Increases; ei, computer specialists; lv, manufacturing; es, motor vehicles). Often labour shortages...
- internal devaluation hits public sector, exports depend on markets recovering (Baltics), on having right products (de), on shift towards higher quality (ei).
Losing long-term potential?

• Austerity and low wages – lose highly-skilled, research/education potential,
• Note investment - biggest item in decline,
• EU 2008-2013; -21%, Germany; -4%, Ireland; -52%, Greece; -56%, Latvia; -30%, due to private and public investment, due to reduced bank lending and to reduced public spending,
• Funds seeking long-term investment potential, low long-term interest rates (in some countries), not a question of can’t afford it,
Troika results

• Specific countries, price of credit escalating, turned to EU/IMF/ECB for help,
• strict conditions imposed for financial survival; cut public spending, then more vigorous ways to cut wages, to improve ‘competitiveness’,
• see results of policies they required,
• not precise, take forecast from EU, closest to agreement, and compare results after 2 years,
Troika results v forecasts

Greece, May 2010
Ireland, December 2010
Portugal, June 2011
public debt/GDP (right-hand scale)
Conclusion

• If cuts have stopped, then should be some recovery,
• export growth, not universal, depends on demand elsewhere, slow growth in EU,
• restore growth? Banking, structural transformation, enable gvt borrowing, investment,
• individual .v. EU level policies? individual now can work only for some,
• European problem needs at least in part European solution.
